Operating Instructions for Dishwasher
G 450 SC

CARING FOR THE ENVIRONMENT

This paper is manufactured from straw cellulose. Straw is a natural agricultural residue from cereal production and its use in paper helps to save more trees.

Description of Appliance

1. Temperature selector
2. Door release
3. Indicator light
4. Program switch (sequence indicator)
5. Selector switch – Heated Drying ON/OFF
6. Upper spray arm (not visible)
7. Cutlery tray
8. Upper basket
9. Middle spray arm
10. Lower spray arm
11. Filter combination
12. Detergent dispenser
13. Rinse-aid indicator
14. Rinse-aid reservoir with dosage selector
15. Data plate
16. Four height adjustable screw feet

Help to protect our environment

Disposal of the packaging material

The transport and protective packing is mostly manufactured from the following re-useable materials:

- corrugated paper/cardboard
- polystyrene – CFC-free
- polyethylene foil (transparent)
- untreated wood
- fiber board – solvent-free

Rather than just throwing these materials away, please take them to the nearest local authority collection point for specific waste.

Disposal of your old machine

Old machines contain materials which can be recycled. Please contact your local authorities or scrap merchant about potential recycling centers before disposal.
Important Safety Instructions

**WARNING –**
When using your dishwasher, follow basic precautions, including the following:

- Always read instructions before using the appliance. This prevents damage to the appliance and ensures your safety.
- Use the appliance only for its intended purpose.
- The appliance conforms with the uniform Safety Regulations. Repairs should only be carried out by qualified experts. Disconnect the appliance from the power supply when servicing (pull out plug or remove fuse).
- Install built-in and integrated units only under a continuous countertop which is secured to adjacent cabinetry.
- The dishwasher must be electrically grounded. Read installation instructions for details.
- Use only recommended detergents and rinse aids.
- Do not use your dishwasher unless all enclosure panels are properly in place.
- To reduce the risk of injury, do not allow children to play in or on a dishwasher.
- Dishwasher detergent contains Sodium Silicate and Sodium Carbonate. In case of eye contact, immediately flush well with water. If swallowed, give large quantities of milk or water. Call a physician. Keep out of reach of children.
- Do not tamper with controls.
- Do not drink the water from the wash cabinet!
- When loading items to be washed:
  a. Load sharp items so that they are not likely to damage the door seal.
  b. Load sharp knives with the handle up to reduce a risk of cut-type injuries.
- Do not wash plastic items unless marked “dishwasher safe” or the equivalent.
- For items not marked, check manufacturer’s recommendations.
- Do not abuse, sit on, or stand on the door or dish rack of the dishwasher.
- Do not touch the heating elements during or immediately after the rinse cycle. Risk of burns!
- Remove the door to the washing compartment when removing an old dishwasher from service or discarding it.
- Hydrogen gas may build up in the water heater and hot water pipes when the hot water system has not been used for two weeks or more. **CAUTION – hydrogen gas is explosive.** If the hot water system has not been used for such a period, before using the dishwasher turn on all hot water faucets and let the water flow from each for several minutes. Do not use the dishwasher before doing so. As running hot water will release any accumulated hydrogen gas, do not smoke or use an open flame while the faucets are open.
- Shut off water supply when leaving for an extended period of time.

SAVE THESE INSTRUCTIONS
Economy Wash

These dishwashers are extremely water and energy saving. Note the following hints:

- Connect dishwasher to hot water. This saves time and energy and protects the dishes.

  Energy costs are further reduced if the water is pre-heated.

- Fill the baskets to full capacity, but do not overload.

- Select a program according to type of load and amount of soils.

- For half-loaded baskets, select “Economy” Program.

- Pay attention to dosage instructions for the detergent.
Opening and Closing the Door

To Open

- Hold handgrip and push up.

If the door is opened during operation all functions are automatically interrupted.

To Close

- Insert baskets.
- Pull door up and close until it catches.
Adding Rinse Aid

Rinse aid is necessary for spotless dishes.
It is poured into the storage container and the required amount is automatically dispensed during the final rinse.

Inadvertently filling the rinse aid storage container with powder or liquid detergent always leads to damage to the storage container.
Only pour rinse aid formulated for domestic dishwashers into the rinse aid storage container.
Although it is possible to use household vinegar with at least 5% acid content, or liquid citric acid (up to 50% acid) as an alternative, the resulting rinsing and drying quality will not be as good as when rinse aid is used.
Do not use vinegar with a high acid content (e.g. vinegar essence 25% acid). This could damage the dishwasher.

Adding rinse aid

- Add rinse aid when the indicator light “Rinse aid” on the control panel comes on.

- Depress button until lid opens ①.
Adding Rinse Aid

- Add rinse aid until top of level indicator gets dark ②.
- Close lid tightly, wipe off any excess rinse aid.

The lid is always closed at the end of the program!

Setting the dosage

- To obtain the best drying results use the selector on setting 5. (FOR AMERICAN RINSE AID ONLY)
- Set dosage selector ③ to higher setting when dishes show spots.
- Turn lower, if dishes are cloudy.
Loading Dishwasher

Please Note:

- Place dishes in such order that they can be rinsed from all sides.
- Dishes and cutlery should not cover each other.
- Hollow objects, such as cups, glasses and pots should be inverted.
- Dishes with recessed bottoms, such as cups, bowls, etc., should be placed in such a way that the water runs off.
- Place tall, narrow objects in the center basket.
- Do not cover small objects in top basket with large ones, for example: place dessert cups on top of regular cups, not the other way around.
- Make sure not to cover up the inlet funnel to the spray arm in the center of the upper basket.
- Do not block spray arms with tall objects. If necessary, manually rotate the arms to test them.

Upper Basket

The upper basket mainly accommodates small, delicate objects, such as:

- Cups
- Saucers
- Dessert Plates
- Glasses
- Small Bowls
- Heat-Resistant Plastic Ware

Lower Basket

The lower basket accommodates large objects, such as:

- Plates
- Saucepans
- Bowls

Glasses may only be cleaned in the lower basket if it is fitted with a special glassware insert.

Cutlery Tray

The cutlery tray ensures excellent cleaning and drying results, is easily loaded and prevents objects from getting scratched. The loading and unloading is especially hygienic as only the handles are touched. Sharp knives and forks do not present a danger.

Where water has a high mineral content, it may be necessary to polish silver cutlery after it has been washed if a high shine is required.
- It is recommended that the cutlery be arranged in zones, i.e. one zone for knives, forks, spoons and teaspoons, etc. This also makes unloading much easier.

- Place spoons sideways into the grids so that water can easily drain off.

A variety of cutlery may be arranged in the cutlery tray. For instance: spoons with round or oval handles can be placed the other way around, but make sure the water can easily drain off.

For your information: the cutlery tray is removable, thus making the removal of your cutlery easier.
Loading Dishwasher

Lower basket

Upper basket

In the corners of the upper basket there are slanting holders to take narrow glasses. These hold them in an optimum position for a thorough clean.
Cutlery tray
Loading Dishwasher

Adjusting the flap-up cup rack

The cup rack can be raised right up or only by 11 mm if required.

- Raise it right up to place tall items on the rack below.
- Raising it by only 11 mm is useful if, for example, you wish to place cups with recessed bases on it such that water will not collect in the recess. Raising the rack holds the cups at an angle so water runs off them easily and they dry more efficiently.

Cutlery tray insert

The cutlery tray insert is removable and can be carried to the cutlery drawer for easy unloading and putting away of cutlery.
Adjusting the upper basket

In order to make room for larger objects in the upper and lower baskets, the position of the upper basket can be changed.

- Pull out upper basket and loosen screws on both sides.
- Lift basket up or down, tighten the screws again.

In this position of the upper basket, plates of following diameters can be fitted (see table).

<table>
<thead>

<td>8&quot;</td>
<td>10&quot;</td>
</tr>
</tbody>
</table>
Not suitable for Dishwashers

- Utensils with wooden or plastic handles.
- Wooden or plastic objects and cutting boards may warp or split.
- Old knives. Blades and handles of old knives may be glued together and therefore should not be cleaned in the dishwasher as the glue may not be heat-resistant.
- Handmade craft items.
- Copper or tin items.
- Plastic articles may distort if they are not heat-resistant. Only wash plastic articles known to be heat-resistant in a dishwasher, in which case, use the top basket only.

When in doubt, wash by hand.

Please note:
Silver and aluminium articles when used with foods containing sulphur, may suffer some discoloration. Discolorations on silver cutlery can be removed with silver polish.

Painted dishes – over the glaze
Colors painted on over the glaze are generally produced in a quality which, bearing in mind the normal lifespan of the article, can be regarded as permanent.

With frequent use, fading of some delicate colors cannot always be entirely avoided.

If you are not sure whether the colors of a particular set of dishes are permanent, test wash one or two items which are already damaged for about four weeks.

MIELE recommends the following

Glasses should only be washed using the 130°F (55°C) programs. The risk of damage to the surface of the glass, in the form of white clouding, increases with higher temperature.

Because very high temperatures can cause damage to your delicate crystal glasses, we recommend you wash these by hand, if your incoming water is above 115°F (45°C).

When purchasing new dishes, make sure they are dishwasher-safe.
Adding Detergent

Detergent is poured into the dispenser before each program, except for “Rinse & Hold”.

Use the correct dosage.

**Only use detergents formulated for domestic dishwashers.**

- Press the opening catch on the container flap forward (see arrow). The flap will spring open. The flap is always open at the end of a program.

- Pour in the required amount of detergent. See p. 20.

Pre-wash in small compartment (I)
Main wash in large compartment (II)

- Shut the flap.

**Note**

Dishwasher detergent contains Sodium Silicate and Sodium Carbonate. In case of eye contact, immediately flush well with water. If swallowed, give large quantities of milk or water. Call a physician. Keep out of reach of children.

- The effectiveness of different detergents can vary. Therefore it may be necessary to add more detergent than is advised on page 20.

- If you buy detergent in bulk, check that the package is always properly sealed after use. Otherwise, the detergent can lose its effectiveness.
Selecting Program

Select a program according to type of dishes and degree of soils. In most cases the "Normal" Program is used.

- "NORMAL 55° C/130° F" (with one pre-wash cycle)

This program is particularly suited for daily washings.

**Special Program**

On next page various programs and their use are listed.
# Types of Programs

1) Electrical consumption and duration of programs are based on incoming water of 130° F.

*) Comparison Program

**Detergent scoop guide**

The scoop for detergent has 4 divisions. Each division has the following values:

division 1 (lower)       – 5 gr – 1/6 oz
division 2 (2nd)        – 15 gr – 1/2 oz
division 3 (3rd)        – 20 gr – 2/3 oz
division 4 (top)        – 30 gr – 1 oz

Switching ON and OFF

Switching on

- Close the door.

- Turn the program sequence knob in a clockwise direction to the beginning of the required program designated by the "●" Symbol eg. INTENSIVE.

- Turn the temperature knob to the required temperature eg. setting 70° C/160° F.

- The program cycle begins.
If you turn the dial past the program start point by mistake:
  • Turn the program sequence knob clockwise to the required program start point.

The program sequence knob
During the program the **program sequence knob** moves around the dial to show which stage has been reached:
  - Pre-rinse (not shown)
  - Main wash
  - Interim rinse
  - Final rinse
  - Drying

The program sequence knob remains stationary during the warm-up phases of the wash and rinse cycle until the required temperature has been reached.

A program is complete only when the program sequence knob is at the end position.

The Rinse & Hold program is complete when the program sequence knob stops just before the start point of the intensive program.

**WARNING**
Do not try to take short-cuts by turning the selector past stages in a program. This can lead to important functions being interrupted.

Switching OFF
Upon completion of a program:
  • Turn the temperature knob to ‘0’.

Changing program
It is possible to change temperature within a program, eg. **NORMAL 55°C/130°F** to **NORMAL 70°C/160°F**. **ECONOMY 55°C/130°F** to **ECONOMY 70°C/160°F** if changing a program eg. **INTENSIVE** to **NORMAL**, it is advised to first turn the appliance off.

To interrupt a program
The program is interrupted immediately when the door is opened. When the door is shut again the program continues from the point where it was interrupted.

Take care
If the water in the dishwasher is hot, there is a danger of scalding. Only open the door if absolutely necessary, and then with greatest care.

Important
Lean, but do not close the door for 20 seconds before firmly shutting the door. This will keep a balanced temperature in the wash cabinet.
Unloading Dishwasher

- Hot dishes are sensitive to shocks. Therefore, allow dishes to remain in dishwasher for approximately 15 minutes to cool off.

- If the door is kept open, the load will cool off faster.

- The lower basket should be cleared first.

- Unload from the bottom upwards to prevent water from the cutlery tray or top basket from dripping onto the lower level.
The dishwasher must not be used without all the filters in place.

Cleaning the filters in the wash cabinet

It is of utmost importance that the filters are kept clean:

Removing left-over soils

- Press the two tabs of the coarse filter inwards and lift up to remove to clean.
- Replace the clean filter and press until it clicks back into place.

- Swing the handle to the right. This unlocks the filter combination.

- Replace the filter combination so that it lies flush on the floor of the wash cabinet. Swing the handle from right to left to lock in place.

- Remove the filter combination. Remove coarse soils and rinse under running water.

Most of the coarse soils are collected in the coarse filter. Cleaning the coarse filter is easier when it is removed from the micro-fine filter.
Cleaning and Care

Cleaning the spray arms

Particles of food can get stuck in the spray arm jets. The spray arms should be inspected and cleaned regularly (approx. every 6 months).

- Remove all baskets and unscrew the upper and middle spray arms.

- In dishwashers with a cutlery tray the upper spray arm is easy to unscrew if the upper basket stays pushed in and just the cutlery tray is pulled out.

- The lower spray arm is easy to clean. Open the cap in the direction of the arrow (see illustration).

- Using a sharp, pointed object to push the food particles into the jets and rinse under running water.

- After cleaning, close up the cap again and push the spray arm firmly back in place.

- When replacing the upper spray arm ensure the spray holes point upwards and the spray slits point downwards.

- After replacing the spray arms, check that they move freely.

- Lift the lower spray arm upwards to remove it.
Cleaning the drain pump and non-return valve

If water has not been pumped away at the end of a program, the drain pump or the non-return valve might be blocked. They are, however, easy to clean.

- Take the filter combination out of the wash cabinet.

- Push down the locking clamp and lift up the non-return valve.
- Rinse the non-return valve under running water.

The drain pump is situated under the non-return valve (see arrow).

- Before replacing the non-return valve, check to make sure that nothing is obstructing the drain pump.
- Carefully replace the non-return valve and secure with the locking clamp.
Cleaning and Care

Cleaning the filter in the water inlet
A filter is incorporated in the screw connection of the valve on the water inlet hose. The filter must be cleaned when dirty, otherwise insufficient water flows into the wash cabinet.

Warning
The plastic housing of the water connection hose contains an electrical component.
It must not be submerged in water.

To clean the filter
- Switch off the dishwasher.
- Turn off the water inlet tap and unscrew the inlet hose.
- Carefully remove the rubber seal.
- Remove the filter, using pointed pliers and clean.

- Replace filter and seal. Make sure they are sitting correctly.
- Screw back into the water inlet, taking care that it goes back on straight.
- Turn on the water inlet tap gradually to test for leaks. If there is a leak, screw the connections on more tightly.

Fitting an in-line water filter
If the water contains a large number of insoluble substances, we recommend fitting a large area filter in the connection between the water inlet tap and the water inlet hose. These filters can be obtained from the Miele Spare Parts Department (Part no. 75577).

Cleaning
The control panel
- Should only be wiped with a damp cloth.

DO NOT USE A SCOURING AGENT.

Fitted fronts
- Should be cleaned with a product suitable for the type of door fitted. Fronts made of wood should only be rubbed down with a damp cloth and dried with paper.

DO NOT USE ANY CLEANER CONTAINING AMMONIA OR THINNERS.
If the water pressure is too low (i.e. less than 15 PSI flow rate at the take off point) too little water may flow into the cabinet.

**To check the water level**
- Start the “Rinse & Hold” program.
- After approx. 3 minutes, open the door and remove the lower basket from the machine.

The water level is correct if it is within the area shown in the illustration. If the water level is below this level there is too little water.
- Contact your nearest Miele Service Department for advice.

**Non-heated drying**
The heating element can be switched off during the drying cycle by turning the upper switch into the horizontal position as shown, using a flat head screwdriver.
Dealing with Minor Faults

With the aid of the following explanatory notes, minor faults can be corrected without contacting the Miele Service Department.

Any work on the electrical components of the appliance should only be carried out by a suitably qualified and competent person.

Faults/possible causes

The dishwasher does not start
- The door is not properly closed.
- The plug is not properly inserted.
- The circuit breaker is defective.

The dishes are not clean
- The dishes are incorrectly loaded.
- The correct amount of detergent was not used.
- Not enough water in the wash cabinet: see p. 29 to check water level.
  - The water inlet faucet has not been opened fully.
  - Filter in the water inlet is blocked: see p. 28 to clean.
  - Water pressure is too low.
- Filters in the wash cabinet are not clean: see p. 25 for cleaning.
- Spray arm jets are blocked: see p. 26.
- Spray arms are hindered by dishes stacked too high in the baskets.
- Drain System clogged
- Air gap not clean (external)

White residue on cutlery and dishes
- Water hardness too high.
- Not enough rinse-aid.

Water in the wash cabinet after completion of program
- The outlet hose is kinked.
- The drain pump or the non-return valve is blocked.
  To clean the drain pump or the non-return valve see p. 27.
- The external air gap on the countertop is clogged

Should you still have difficulties, please contact your MIELE Dealer or the MIELE Service Department (see back cover for address) and give Type and Model of appliance. This information can be found on the data plate on inside of door.
The dishwasher must be installed correctly. Follow the installation guidelines in the separate booklet carefully.

- The dishwasher must be installed correctly and leveled accordingly. Any unevenness in the floor level can be compensated by adjusting the screw feet:

**Adjustments**
(Total height)

- Standard Model 32½"
- Adjustable Height 34½"

**Building under**

“U” and “i” models are designed specifically for building under a continuous countertop.

To ensure stability, these dishwashers must not be installed “free standing”. They must be installed under a continuous countertop which has been firmly screwed to neighboring cabinets.

On “i” models, the door panel should not weigh more than 12 lbs.
Electrical Connection

The appliance is delivered complete with cable and plug for A.C. (alternating current) electrical power 120 Volt, 60 Hz. Connect the appliance only to a regular 15 Amp electrical outlet.

The appliance must be grounded and the connection must be done according to regulations and local codes.

Rated Load: 1.5 kW
Fuse Rating: 15 A
Connection Cable: Approx. 4' long.

All electrical work should be carried out by a qualified electrician in accordance with national and local regulations.

See separate installation instructions.
Water Connection

- The inlet hose is approx. 4' long; a longer hose (12') may be bought from the Miele Spare Parts Department.
- A shut-off valve with a \( \frac{3}{8}'' \) compression fitting connection is necessary or \( \frac{3}{4}'' \) male hose thread shut-off valve.
- For the Miele “Waterproof” leak protection system to function properly, the inlet hose must be connected to the shut-off valve in the correct manner. Please follow the separate installation instructions for the “Waterproof” system unit.

- Water pressure must be between 14.5 PSI and 145 PSI. Max. temp. 140° F.
  In case of varying or extra low pressure, the MIELE Service Dept. will advise.

NB. The dishwasher is suitable for hot water connection.

Water Drainage

- A non-return valve is built into the appliance to prevent dirty water from running back into the dishwasher.
- The appliance is equipped with a 4' long flexible hose, approx. \( \frac{7}{8}'' \) in diameter.
- Longer drain hoses are available.
- A hose clamp is enclosed for connection to drain system.
- The drainage hose should not be longer than 12' and pump height should not exceed 3'.
- The drainage hose should not be shortened.

Please follow the enclosed installation instructions carefully.
