When using the appliance, follow basic safety precautions, including the following:

Read all instructions before installation and use to prevent accidents and machine damage.

This appliance is intended for residential use only. Use only as described in this Operating manual.

Only use the appliance for its intended purpose.

This appliance complies with current safety requirements. Improper use of the appliance can lead to personal injury and material damage.

Keep these operating instructions in a safe place and pass them on to any future user.

Electrical Safety

- Before installation, make sure that the voltage and frequency listed on the data plate correspond with the household electrical supply. This data must correspond to prevent injury and machine damage. Consult a qualified electrician if in doubt.

- Before installation or service, disconnect the power supply to the work area by unplugging the unit, "tripping" the circuit breaker or removing the fuse.

- Do not use an extension cord to connect this appliance to electricity. Extension cords do not guarantee the required safety of the appliance (e.g., danger of overheating).

- Be certain your appliance is properly installed and grounded by a qualified technician. To guarantee the electrical safety of this appliance continuity must exist between the appliance and an effective grounding system. It is imperative that this basic safety requirement be met. If there is any doubt, have the electrical system of the house checked by a qualified electrician.

- Only connect power to the appliance when all installation work is complete.
Installation

This appliance is top-heavy and must be secured to prevent the possibility of tipping forward. Keep the door closed until the appliance is completely installed and secured per the installation instructions.

- This appliance must be installed and connected in compliance with the installation instructions.
- Installation and repair work should be performed by a Miele authorized service technician. Work by unqualified persons could be dangerous and may void the warranty.
- Installation must comply with local regulations and state laws.
- Do not operate any appliance with a damaged cord or plug, or if the appliance has been damaged in any manner. Contact Miele's Technical Service Department.
- This appliance must not be used in a non-stationary location (e.g. on a ship).
- Do not install the refrigerator in a room with too low an ambient temperature, e.g., a garage, as this may lead to the appliance switching off for longer periods so that it cannot maintain the required temperature.

Use

- This appliance is not designed for commercial use. It is intended for use in domestic households and in similar working and residential environments such as:
  - shops, offices and similar work environments
  - by customers in hotels, motels, Bed & Breakfasts or similar residential environments.
- This appliance is not intended for outdoor use.
- Persons who lack physical, sensory or mental abilities, or experience with the machine should not use it without supervision or instruction by a responsible person.
- To reduce the risk of injury, do not allow children to play in, on or near the appliance, especially in the door hinge area.
- After your refrigerator is in operation, do not touch the cold surfaces in the refrigerator compartment, particularly when hands are damp or wet. Skin may adhere to these extremely cold surfaces.
- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- Do not use any oils or grease on the door seal, as these will cause the seal to deteriorate and become porous with time.
Do not block the ventilation gaps in the plinth or the top of the appliance housing unit, as this can impair the efficiency of the appliance, increase the electricity consumption and cause damage to the appliance.

Never use a steam cleaner to clean the appliance. Pressurized steam could damage electrical components and cause a short circuit.

The following applies to stainless steel appliances:

Do not use sticky notes, transparent adhesive tape, masking tape or other types of adhesive on the coated surface of the appliance door. These will damage the surface, causing it to lose its soil resistant protective coating.

The high-quality surface coating of the appliance door is susceptible to scratches. Even a magnet can cause damage.

Disposal of your old appliance

Before disposing of an old appliance, first make the door latch or lock unusable.

Take off the door.

Leave the shelves in place so that children may not easily climb inside.

Consult with your municipal policy on recycling.

Be careful not to damage any part of the pipework while awaiting disposal by:
- puncturing the refrigerant channels in the evaporator.
- bending any pipework.
- scratching the surface coating.

Splashes of refrigerant can damage the eyes.

Your old refrigerator may have a cooling system that used CFCs (chlorofluorocarbons). CFCs are believed to harm stratospheric ozone. If you intentionally release this CFC refrigerant, you can be subject to fines and imprisonment under provisions of environmental legislation. Make sure the CFC refrigerant is removed and disposed of by a qualified technician.

Guide to the refrigerator

Control panel

1. Access button "●" activates the control panel
2. Refrigerator
3. Upper SmartFresh drawer
4. Lower SmartFresh drawer
5. Temperature display
   V colder; ∧ warmer
   Allows you to set the desired temperature in the refrigerator
6. Food type(s) to be stored in the SmartFresh drawers
   (left: high humidity right: lower humidity)
7. On/Off sensor button for the SuperCool function
8. Sensor button for the temperature and door alarm*

* Only visible when the relevant function is activated
Before using for the first time

- Clean the inside of the appliance and the accessories with a mild solution of warm water and liquid dish soap. Dry with a soft cloth.

If the appliance was transported or laid horizontally for any reason, allow it to stand vertical for at least 8 hours before turning it on. Failure to do so will affect the functioning of the appliance.

Turning the appliance On/Off

- Open the appliance door.

- Turn the appliance On/Off with the main switch.

The main switch is located on the right-side underneath the control panel.

All zones are switched on or off together.

Once on, the appliance begins cooling. When the door is open, the interior lights come on.

The access button will light in the control panel.

The preset temperatures (factory settings) are reached after a few hours. Do not put any food in the appliance until the preset temperatures are reached.

⚠️ Switching the appliance off with the main switch does not safely isolate it from the power supply.
Using the settings

This appliance is operated with the use of touch keys activated by a finger.

– An available button will appear white.
– A selected button will appear yellow.

Touch the access button ".INFO" so it turns yellow.

On the control panel you will now see the sensor buttons for the three appliance zones.

To change settings (e.g., to set the temperature, etc.), touch the sensor button for the appliance zone you wish to set.

The selected sensor button appears yellow and depending on the zone selected, additional sensor buttons will appear on the control panel.

Depending on the zone selected, you can now:
– adjust the temperature,
– select the SuperCool function or
– select settings for the SmartFresh drawers by food type.

For additional information, see the corresponding sections in the manual.

To de-select a zone touch the sensor button for that particular zone so that it turns white or select another sensor button.

To leave the settings menu, touch the access button ".INFO" so it turns white. The last settings entered are stored. If the access button is not pressed the display will go out after approx. 30 secs.

The sensor buttons for the three appliance zones now disappear from the control panel.
Custom settings

In the custom settings mode you can select and change functions. The function possibilities are described in the respective chapters of this manual.

<table>
<thead>
<tr>
<th>Function</th>
<th>Display text</th>

</tbody>
</table>

Turning the button sound On/Off

If you prefer the buttons to be silent when touched the button sound can be turned off.

- Touch the access button " mô " so it turns yellow.

- Touch the sensor button for the refrigerator so it turns yellow.

- Note the position of the \( \text{\textbullet} \) button, but do not touch.

- Touch the access button " mô " again so it turns white.

Only the access button " mô " is visible.

- Place one finger on the position of the \( \triangledown \) button and hold (the \( \triangledown \) button will not be visible).

- While holding down the \( \triangledown \) button, press the access button " mô " once. Keep holding the \( \triangledown \) button down until the following appears in the display (approx. 5 seconds).

- Tap the \( \triangledown \) button until \( b \) appears in the display.

- Touch the access button " mô " to confirm.
**Settings**

- By touching the V button, you can choose between:
  - b 0: Button sound is off
  - b 1: Button sound is on
  - b –: Return to menu.
- Touch the access button "I" to confirm the setting.
- Tap the V button until you see ε in the display.

- Touch the access button "I".

You have now left the Custom settings mode.

---

*When you are in the Custom settings mode the door alarm is turned off automatically. Once the door is closed it is reactivated.*

---

**Turning off for longer periods of time**

If the appliance is not going to be used for an extended time (for example, during a vacation) some precautions should be taken.

- Take all food out of the appliance
- Turn the appliance off at the main switch
- Unplug the appliance
- Clean the interior
- Leave the door open to prevent odors
The appliance is equipped with an alarm system, to ensure that the temperature does not rise unnoticed because of energy loss or an open door.

The alarm system is always operational, it does not need to be switched on.

Temperature alarm

If the temperature becomes too warm, an alarm sounds, the "alarm" indicator turns red and flashes. At the same time the affected zone flashes in the display.

The alarm will sound and the display will flash if:

- too much warm air flows into the appliance, for example when food is being loaded, re-arranged, or taken out.
- large amounts of food are loaded at once.
- the power fails.

Turning the temperature alarm Off

As soon as the alarm condition is corrected, the alarm signal turns off and the affected zone stops flashing in the display. The "alarm" indicator goes out.

To turn the alarm off early, press the "alarm" sensor button. The alarm signal turns off. The "alarm" indicator remains red and the corresponding appliance zone continues to flash until the alarm condition is corrected.

Door alarm

If the appliance door is left open, an alarm signal will sound and the "alarm" indicator will turn red after five minutes.

Turning the door alarm Off

Once the door is closed the alarm turns off and the "alarm" indicator goes out. If the door has not been closed properly, the alarm will sound again after five minutes.

To turn the alarm off early, press the "alarm" sensor button. The "alarm" indicator and signal will turn off.
Setting the temperature

Setting the temperature in the refrigerator

- Touch the access button "★" so it turns yellow.

- Touch the sensor button for the refrigerator so it turns yellow.

- Use the ▼ and ▲ buttons next to the temperature display to set the temperature warmer or colder.

The display will flash if:
- a different temperature is being set,
- the temperature in the appliance has risen by several degrees, indicating that the appliance is warming up too much.

Temperature range

The temperature can be selected within the following ranges:

- Refrigerator: 35 to 46°F (2°C to 8°C)

A temperature of 37°F (4°C) in the refrigerator section is recommended.

The room temperature and the installation location can affect the time it takes for the appliance to get to the desired temperature. If the room temperature is too high, it may not be possible for the appliance to reach the lowest temperature.
Temperature unit (Fahrenheit/Celsius)

The temperature can be displayed in degrees Fahrenheit (°F) or Celsius (°C).

- Touch the access button "I" so it turns yellow.

- Touch the sensor button for the refrigerator section so it turns yellow.

- Note the position of the V button, but do not touch.

- Touch the access button "I" again so it turns white.

Only the access button "I" is visible.

- Place one finger on the position of the V button and hold (the V button will not be visible).

- While holding down the V button, press the access button "I" once. Keep holding the V button down until the following appears in the display (approx. 5 seconds).

- Tap the V button until † appears in the display.

- Touch the access button "I" to confirm.

- By touching the V button you can select either Fahrenheit or Celsius for the temperature display.
  - † 0: Fahrenheit
  - † 1: Celsius
  - † -: return to menu

- Touch the access button "I" to confirm the setting.

- Tap the V button until a c appears in the display.

- Touch the access button "I".

You have left the Custom settings mode.

When you are in the Custom settings mode the door alarm is turned off automatically. Once the door is closed it is reactivated.
SmartFresh drawers

The SmartFresh drawers provide the right combination of temperature and humidity. The result is freshness up to three times longer than in the other zones of the refrigerator.

Storage temperatures

For fresh foods that are not adversely affected by cold, the best range is 32° - 37°F (0° - 3°C). This helps to keep the food fresh considerably longer than in the rest of the refrigerator, spoiling is minimal.

The temperature is set to approx. 35°F (1.5°C).

Humidity

The closer the humidity in the appliance matches the moisture content of the food, the more moisture the food will retain, and the fresher and crisper it will stay over a longer period of time.

The optimal humidity is determined on the basis of the food stored in the appliance.

Proper humidity is assisted by 2 humidity filters located above the SmartFresh drawers. These filters allow air to pass through, yet retain moisture.

Using the SmartFresh drawers

- Use the sensor button to select the desired drawer.

The selected sensor button turns yellow, and the sensor buttons for the food choices appear.

fruit  meat  deli  dairy  fish  veg

The most recently selected food type(s) appear yellow.

- Use the sensor buttons to select the food type(s).
- Several food types can be selected at the same time.
- To delete a food type, simply press it again.
- Depending on the food types selected, the optimal humidity is determined for the SmartFresh drawers.
- The "deli" and "dairy" settings are the most energy efficient.

- Touch the access button to confirm the settings.
- Place the food in the drawer.
- Repeat the process above to additional food types.
Tips for storing food in the SmartFresh drawers

For optimal storage conditions, it is always best to store similar foods together in one drawer.

The upper SmartFresh drawer is the best place to store moisture sensitive foods.

Be sure the drawers are clean and dry before placing food in them.

Foods that are best stored under dry conditions

- fresh fish and shellfish, meats, poultry, sausage, dairy products and deli salads.

Foods that are best stored under moist conditions

- fresh produce, e.g., vegetables, lettuce, herbs, mushrooms, cabbage, fruit.

Remember that higher moisture levels can only be attained when the food is stored unpacked so air can circulate freely.
Using the refrigerator efficiently

Different storage zones

Due to the natural circulation of air in the appliance, there are different temperature zones in the refrigerator. Cold, heavy air sinks to the lowest section of the appliance. Make use of these different zones when placing food in the appliance.

This appliance uses a dynamic cooling feature to establish a constant temperature during cooling. As a result, the differences between temperature zones are less pronounced.

Leave some space between items, so air can circulate freely around them. Make sure the ventilation slits are not covered - this is important for the cooling performance.

Warmest area

The warmest area is in the top section of the door. Use this area to store items such as butter and cheese.

Coldest area

The coldest area in the refrigerator is directly above the SmartFresh drawers. The temperature in the drawers themselves is even colder.

Use these cold areas in the refrigerator for all highly perishable foods, such as:

- fish, meat, poultry,
- deli meats, store-bought meals,
- dishes or baked goods containing eggs or cream,
- fresh bread dough, pastry dough, cake batters,
- dairy products.

If storing high-proof alcohol, make sure it is tightly closed and stored upright.

Do not store cooking oil in the refrigerator door. Traces of oil can cause stress cracks to occur in the plastic components in the door.

Do not allow food to touch the rear wall of the appliance, it may freeze to the wall.
When the SuperCool function is activated, the appliance is cooled as cold and quickly as possible (to a factory-preset temperature).

The SuperCool function is ideal for the rapid cooling of drinks and for refrigerating large quantities of foods.

**Switching on SuperCool**

- Touch the sensor button for the refrigerator so it turns yellow.

In the temperature display for the refrigerator zone, the new temperature setting appears, 35°F (2°C).

The temperature in the appliance now begins to fall, with maximum cooling in the refrigerator zone.

**Switching off SuperCool**

The SuperCool function automatically switches off after approx. 6 hours. The sensor button turns white, and the appliance continues running at normal power.

To save energy, the SuperCool function can be switched off early, once the food and/or drinks are sufficiently chilled.

- Touch the SuperCool sensor button so that it turns white.

The temperature display for the zone selected returns to the original temperature setting.

The appliance now continues running at normal power.
Automatic defrost

Refrigerator and SmartFresh drawers

The refrigerator and SmartFresh drawers defrost automatically.

During normal operation, condensate and frost can form on the rear wall of the refrigerator and drawers. You do not need to remove this build-up, it will defrost and evaporate automatically with the heat generated by the appliance.
Moving the shelves

The shelves can be adjusted according to the height of the food.

- Using both hands, grasp the shelf from underneath and lift slightly so that the rear of the shelf is slightly above the mountings.
- Pull the shelf forward.
- Move the shelf to the desired height, then insert the (rear) hooks into place.
- Make sure the shelf is level.

Deli drawer

This drawer is set on telescopic tracks. It can be pulled in and out for loading and unloading, or removed for cleaning.

- Open the drawer.

On both sides of the drawer, pull the latches (see arrow) upward and lift the drawer out of the refrigerator.

Push the tracks back into the refrigerator to avoid injury.

Replacing the drawer

- Completely extend the telescopic tracks.
- Lay the drawer onto the tracks so that it connects in the front and back.
- Slide the drawer in.
Adjusting the interior fittings

**SmartFresh drawer**

These drawers are set on telescopic tracks. They can be pulled in and out for loading and unloading, or removed for cleaning.

- Open the drawer.

On the hinged side of the door is a safety lock, which must be turned to a horizontal position before the drawer can be removed.

- Using a suitable object, e.g., coin, turn the safety lock to a horizontal position 1.

- On both sides of the drawer, pull the latches 2 upward and lift the drawer out of the refrigerator.

Push the tracks back into the refrigerator to avoid injury.

**Replacing the drawer**

- Completely extend the telescopic tracks.

- Lay the drawer onto the tracks so that it connects in the front and back.

- Turn the safety lock back to the vertical position.

- Slide the drawer in.
Adjusting the door shelves
For easier loading, unloading, and cleaning, the door shelves can be shifted or completely removed.

- Using both hands, grasp the door shelf by the frame and tip it slightly forward.
- Slide the tipped shelf up or down along the slide-rails, and click it into place with the lower hooks.
- Make sure the shelf is level.

Removing a door shelf
- Slide it upward all the way to the top of the slide-rails, until it can be removed.

Replacing a door shelf
- Start at the top of the slide-rails and slide the shelf down into the desired position.

Removing the hinged door shelf
- Pull the stops upward and out of the shelf, and remove the shelf lid upward.
- Now remove the hinged container upward and out.

Removing the storage shelf from above the deli drawer
- Lift the shelf up and out.
- When replacing the shelf, make sure that the lugs on the corners at the back are correctly engaged.

To remove the shelf above the SmartFresh drawers
- Remove the deli drawer.
- Remove the filler strip at the back, push back the glass shelf slightly, then lift it carefully up and out.
- Replace the deli drawer.
Cleaning and care

To reduce the risk of electrical shock, disconnect the appliance from the power supply by shutting off the power main, tripping the circuit breaker or unplugging the power cord before maintenance.

Never use cleaning agents containing abrasive substances such as sand, soda, acids, chlorides or chemical solvents. Non-abrasive cleaning agents are also unsuitable, as they can cause matte areas to appear.

Only use a mild solution of warm water and liquid dish soap to clean this appliance.

Do not use a steam cleaner to clean this appliance. Pressurized steam could penetrate electrical components and cause a short circuit.

Do not allow water to get into the electronic unit or lights.

The data plate located inside the appliance must not be removed. It contains information which is required in the event of a service call.

To better maintain your appliance avoid the following:
- cleaners containing soda, ammonia, thinners, or chlorides
- cleaners containing descaling agents or lime removers,
- abrasive cleaners,
- stainless steel cleaners,
- dishwasher soap (powder),
- caustic (oven) cleaners,
- scouring pads, steel wool, hard brushes,
- glass cleaners,
- metal scrapers,
- eraser sponges,
- steam cleaning products.

Glass cleaners may be used to clean the exterior. However do not allow them to sit or "puddle", this can cause damage to the surface. Remove the cleaner promptly.
Before cleaning

- Use the main switch to turn the appliance off completely.
  The main switch is located on the right-side underneath the control panel.
- Unplug the power cord.
- Remove any food from the appliance and store it in a cool place.
- Take out any removable parts, e.g., shelves, drawers.

Cleaning the interior and accessories

Use a mild solution of warm water and liquid dish soap. Wash all accessories and drawers by hand. Do not wash in a dishwasher.

- Clean the appliance as needed.
- After washing, wipe down the interior and accessories with a clean wet cloth, then dry with a soft cloth. Leave the appliance door open for a short time, so the moisture can evaporate.

Aluminum frames

The shelf frames are made of aluminum.

- Clean the frames with a mild solution of warm water and liquid dish soap.

Aluminum is susceptible to scratches and nicks, treat with care.

The aluminum frames may become discolored or otherwise altered if soiling is not cleaned away promptly.

Do not use stainless steel cleaners; lime removers; scouring pads, such as pot scrubbers; or used sponges that still contain abrasive cleanser residue to clean the frames.
Cleaning and care

Humidity filters

The two humidity filters, located above the SmartFresh drawers, must be removed for cleaning.

- Remove the SmartFresh drawer.

- Unhook the filter cover ① in each side of the drawer and remove them along with the filters downwards starting from ②.

- Remove the filter mat.

- Clean the filters by rinsing them with lukewarm water.

  Do not clean in a dishwasher or washing machine. This will damage the filter.

- Air-dry the filters.

- Place the filters back in the filter cover.

- Put the filter cover back in place, inserting the rear hooks first.

- Re-insert the SmartFresh drawer.
Ventilation slits

- Check the ventilation slits in the base panel regularly. Remove any dirt/dust with a vacuum cleaner or brush. Clean as needed.

Door seals

Do not use oil or grease on the door seals. This may cause the seals to deteriorate and become porous over time.

- Clean the door seals with water and dry thoroughly.

After cleaning

- Return all shelves and accessories.
- Place food back in the refrigerator and drawers.
- Close the appliance door.
- Insert the plug in the socket and switch the appliance on.
Changing the light bulb

The lighting automatically switches off after the door has been open for approx. 5 minutes. This is not a fault.

After the bulb has cooled for a short time it will turn on again.

If the light does not come on when the door is opened briefly, the light bulb should be changed.

- Use the main switch to turn the appliance off.

To reduce the risk of electric shock, disconnect the appliance from the power supply by unplugging or tripping the circuit breaker.

Upper lighting

- Grasp the front of the light cover with both hands, and slide it back.
- Carefully pull the cover forward and out.

Cleaning and care

- Never touch a halogen bulb with bare fingers.
- When inserting a glass halogen bulb, always hold with a soft cloth.

- Remove the defective light bulb.
- Place the new bulb in the socket.
- Halogen bulb type: 20 W/12 V/socket GY 6.35.
- Slip the rear of the light cover back into position, then pull it forward and into place.
Side lighting

- Turn the light cover counterclockwise and pull out.

Never touch a halogen bulb with bare fingers. When inserting a glass halogen bulb, always hold with a soft cloth.

- Pull the defective light bulb from the socket.

- Place the new bulb in the socket. Halogen bulb type: 5 W/12 V/socket G 4.

- Put the light cover back on and turn clockwise into place.

- Restore power to the appliance.
## Frequently asked questions

With the aid of the following guide minor problems can be corrected without a service call.

Repairs should only be carried out by a qualified and trained person in strict accordance with local and national safety regulations. Unauthorized repairs could cause personal injury or machine damage and may void the warranty.

## Causes of noises

<table>
<thead>
<tr>
<th>Normal noises</th>
<th>What causes them?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brrrr...</td>
<td>A humming noise is made by the motor (compressor). This noise can get louder for brief periods when the motor switches on.</td>
</tr>
<tr>
<td>Blub, blub....</td>
<td>A gurgling noise can be heard when the coolant circulates through the pipes.</td>
</tr>
<tr>
<td>Click....</td>
<td>Clicking sounds occur whenever the thermostat switches the motor on or off.</td>
</tr>
<tr>
<td>Sssrrrrr....</td>
<td>In multi-section and frost-free appliances, the movement of air circulating through the appliance can sometimes just barely be heard.</td>
</tr>
<tr>
<td></td>
<td>In appliances with a water tank, a humming noise can be heard when the water pump is running.</td>
</tr>
<tr>
<td>Crack...</td>
<td>A cracking noise can be heard when the appliance materials expand.</td>
</tr>
</tbody>
</table>

Please bear in mind that a certain amount of noise is unavoidable (from the compressor and the coolant circulating through the system).

### Noises that you can easily eliminate

<table>
<thead>
<tr>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The appliance is not level.</td>
<td>Realign the appliance using a spirit level, by raising or lowering the screw feet underneath the appliance.</td>
</tr>
<tr>
<td>The appliance is touching another appliance or piece of furniture.</td>
<td>Move it away.</td>
</tr>
<tr>
<td>Drawers, baskets or shelves are jiggling or are stuck.</td>
<td>Check all removable items and refit them correctly.</td>
</tr>
<tr>
<td>Bottles or containers are touching.</td>
<td>Separate them.</td>
</tr>
<tr>
<td>The transport cable clips are still hanging on the back of the appliance.</td>
<td>Remove the cable clips.</td>
</tr>
</tbody>
</table>
In the event of a fault which you cannot easily fix yourself, please contact the Miele Technical Service Department at the address on the back of this booklet.

When contacting the Technical Service department, please quote the model and serial number of your appliance given on the data plate inside the appliance.

**MieleCare**

(USA only)

**MieleCare**, our Extended Service Contract program; gives you the assurance of knowing that your appliance investment is covered by 5 years of worry-free ownership. **MieleCare** is the only Extended Service Contract in the industry that guarantees repairs by a Miele Authorized Service Provider using genuine Miele parts. Only genuine Miele parts installed by factory-trained professionals can guarantee the safety, reliability and longevity of your Miele appliance.

Please note that unless expressly approved in writing by the Miele Service department, Extended Service Contracts offered by other providers for Miele products will not be recognized by Miele. Our goal is to prevent unauthorized (and untrained) service personnel from working on your Miele products, possibly doing further damage to them, you and/or your home.

To learn more about **MieleCare** Extended Service Contracts, please contact your appliance dealer or visit us online at:

http://mieleusa.com/mielecare
Installation Instructions

Information is subject to change. Please refer to our website to obtain the most current product specification, technical & warranty information.

To prevent accidents and machine damage read these instructions before installation or use.
Disposing of the packaging materials

The packaging is designed to protect the appliance from damage during transportation. The packaging materials used are selected from materials which are environmentally friendly for disposal and should be recycled.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children. Return the packaging to your dealer.

Disposal of your old appliance

Old appliances may contain materials that can be recycled. Please contract your local recycling authority about the possibility of recycling these materials.

Instead, please contact your municipality’s waste collection center to return and recycle electric and electronic appliances.

Please take care not to damage the pipework while the appliance is being stored for transport to a waste disposal facility.

By protecting the pipework, you help keep the coolants and compressor oil from contaminating the environment.

Before discarding an old appliance disconnect it from the electrical supply and cut off the power cord to prevent it from becoming a hazard.
Have the appliance installed by a qualified technician, according to the enclosed installation instructions.

WARNING
This appliance is top-heavy and must be secured to prevent it from tipping forward. Keep the door closed until the appliance is completely installed and secured as per the installation instructions.

Empty weight of your machine:
K 18x3 Vi ............... 419 lbs (189 kg)
K 19x3 Vi ............... 452 lbs (205 kg)

Climate Range
The appliance is designed for use within certain climate ranges (ambient temperatures) and should not be used outside this range. The climate range of this appliance is stated on the data plate inside the appliance.

<table>
<thead>
<tr>
<th>Climate range</th>
<th>Ambient room temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>SN</td>
<td>+50°F (10 °C) to +90°F (32 °C)</td>

</tr>
<tr>
<td>ST</td>
<td>+60°F (16 °C) to +100°F (38 °C)</td>
</tr>
<tr>
<td>T</td>
<td>+60°F (16 °C) to 110°F (43 °C)</td>
</tr>
</tbody>
</table>

Operating in a room which is too cold will cause the compressor to switch off for too long, causing the internal temperature in the appliance to rise with the risk of food deteriorating and going off.

Installation site
The appliance should be installed in a dry, well ventilated room.

Do not install the appliance:
- outdoors,
- in an environment with dripping water,
- in rooms which are at risk of frost.

The installation location should not be exposed to direct sunlight, nor near a heat source, such as an oven, radiator, etc.

The ambient temperature should not drop below 55°F (13°C) or rise above 110°F (43°C), otherwise malfunctions may occur.

If installation next to a heat source is unavoidable observe the following minimum distances from the heat source:
- 1 ¼" (3 cm) from an electric cooktop or electric oven.
- 12" (30 cm) from a gas or oil cooktop, range or oven.

The following should also be taken into consideration:
- The electrical outlet must be easily accessible in case of an emergency, not concealed behind the appliance.
- The plug and cord must not touch the rear of the appliance as they could be damaged by vibrations from the appliance.
- Do not plug in other devices behind this appliance.
**Important!** When there is high humidity a build-up of condensation on the outer surfaces of the appliance can occur. This can cause the surfaces to corrode. To prevent this, it is advisable to install the appliance in a dry and/or an air-conditioned room with sufficient ventilation. Please ensure that doors close and seal properly after installation and that the appliance is installed in accordance with these installation instructions and with the required ventilation openings.

- If the room is too cold, it will cause the cooling system in the appliance to remain off for too long. This can cause the temperature in the appliance to rise, resulting in damage.
**Base**

A fully loaded appliance is very heavy. The load-bearing capacity of your floor must meet the following requirements:

- **K 18x3 Vi** 996 lbs (452 kg)
- **K 19x3 Vi** 1,191 lbs (540 kg)

To ensure that the appliance is installed securely and functions properly, the base must be flat, level and made of a hard, rigid material.

If in doubt, contact Miele.

**Furniture/fixtures**

The new appliance will be mounted securely to adjacent and overhead furniture/fixtures. For this reason it is essential that all attachable furniture/fixtures are connected securely to the base or the wall by suitable means.

**Ventilation**

The air intake and outlet must not be blocked or covered in any way. They also need to be dusted/cleaned on a regular basis.

**Installation niche**

To ensure safe, trouble-free installation and the best possible cosmetic result, check to be sure that the installation space complies with the installation dimensions. See "Niche dimensions".

The side walls of the installation cavity must be plumb.

The minimum thickness of the side walls and the top wall must be $5/8$" (16 mm).

The minimum thickness of the toe-kick panel must be $1/2"$ (13 mm). A thickness of $3/4"$ (19 mm) is recommended.
**Installation**

**Stainless steel panels**
Stainless steel door panels and toe-kick covers are available from Miele.

**Custom door panels**
This appliance is compatible with all styles and designs of kitchen cabinetry.

The total weight of the decorative panel(s) must not exceed the following:

- **K 18x3 Vi.** 110 lbs (50 kg)
- **K 19x3 Vi.** 81 lbs (37 kg)

**Installation options**
There are many different installation options. These are limited only by the design of the kitchen.

The door hinge cannot be exchanged.

**Single column**
The appliance can be installed at any preferred location in the kitchen.

However, be sure the door will open and close properly in the chosen location.

**Side-by-side**
This appliance can be installed "side-by-side" with another fridge/freezer using a "Merging Kit".

The "Merging Kit" is available from Miele.

Contact Miele or your dealer for specific information about which combinations will work with your appliance.

For instructions on how to attach the appliances and install the heating mat, please refer to the instructions included with the "Merging Kit", available from Miele.

**Installation without a partition using the "Merging Kit"**
If the appliances are installed directly next to each other (without a partition), they need to be attached together using the "Merging Kit".
Installation with partition using the "Merging Kit"

The minimum thickness of the partition is $\frac{5}{8}$" (16 mm).

If there is a partition with a thickness from $\frac{5}{8}$" (16 mm) to $6\frac{5}{16}$" (160 mm) between the adjacent appliances, then each appliance should be individually installed within its own niche using the mounting accessories included. The "Merging Kit" will also be needed. The "Merging Kit" is available from Miele.

Installation with partition without using the "Merging Kit"

If there is a partition with a thickness of more than $6\frac{5}{16}$" (160 mm) between the adjacent appliances, then each appliance should be individually installed within its own niche using the mounting accessories included (the "Merging Kit" is not necessary).

Side panels

If one side of the appliance is visible, a side panel must be used.

The side panel must be firmly secured to the wall, the floor and the overhead furniture/fixtures before the appliance is placed in the cavity.

The dimensions of the side panel are taken from the opposite wall of the installation space. During installation, ensure that the cavity is square and the measurements are correct.

Side panels

If one side of the appliance is visible, a side panel must be used.

The side panel must be firmly secured to the wall, the floor and the overhead furniture/fixtures before the appliance is placed in the cavity.

The dimensions of the side panel are taken from the opposite wall of the installation space. During installation, ensure that the cavity is square and the measurements are correct.
Installation

Adjusting the door opening angle (optional accessory)

Depending on the installation site, it may be necessary to adjust the door opening angle to 90°.

- Open the door.

- Insert the banking pin through the holes and drive in with a hammer.

The door opening angle is now limited to 90°.

Front panel gap kit (optional accessory)

Two adjacent furniture doors can be attached instead of one large door.

To connect these furniture doors on the rear, a metal strip can be purchased as an optional accessory. Contact Miele.

When attaching the metal strip to the furniture doors, observe the maximum length of the screws and the position of the drill holes.
Always screw into the best possible load-bearing material of the custom doors.
Dimensions

Door dimensions (open min. 90°)

*The dimensions of the door fronts and handles will vary according to each individual kitchen.

4" - 5 3/16" (102 - 132 mm)
Before you begin

Read these instructions completely and carefully.
Have the appliance installed by a qualified technician, according to the enclosed installation instructions.

To reduce the risk of injury or damage to the product, two people should be used for installation.

These installation instructions are intended for use by qualified installers. In addition to these instructions, the appliance must be installed in accordance with all local codes. In the absence of a local code, the following should be used:

- In the USA, the National Electric Code, ANSI/NFPA 70 - latest edition/State and Municipal codes and/or local codes.
- In Canada, the Canadian Electric code C22.1 - latest edition/Provincial and Municipal codes and/or local codes.

Tools needed for installation

- Cordless screwdriver
- Torx screwdriver
- Hammer drill
- Wood drills in different sizes
- Hammer
- Rachet 5/16" (8 mm)
- Adhesive tape
- Multi-grip pliers
- Level
- Tape measure
- Square

When fastening the cabinet to the wall behind it (see “Installing the appliance”) use:

- suitable plugs/screws depending on the type of wall.
- several mounting brackets, if required.

Other

- Stepladder
- Dolly, hand truck
- Wooden beam (cross section min. 3" x 4" [75 mm x 100 mm] as an alternative tilt protection, length depends on the width of the installation cavity)
- Wood screws in different sizes

Optional accessories

- "Merging Kit" for side-by-side installation
- Front panel gap kit
- RemoteVision module for wireless monitoring
Aligning the housing unit

The housing unit must be carefully aligned using a spirit level before installing the appliance. The unit corners must be at right angles, as otherwise the furniture door will not align correctly with the 4 corners of the appliance.

- The side panels of the housing must be even.
- The housing unit panels must be at least 5/8" (16 mm) thick.
- The plinth facing must be at least 1/2" (13 mm) thick, preferably 3/4" (19 mm).

Check the installation niche

To ensure a safe, trouble-free installation and the best possible cosmetic result, check to be sure that the installation space complies with the installation requirements.

- Check the base (see "Installation").
- Check the dimensions of the cavity.
- Check that the cavity is square.
- Check the location of the power outlet.
- Check that all furniture parts in the vicinity of the appliance are securely connected to the wall.
- Check that the adjacent furniture/fixtures do not collide with the open door.

Before installation

⚠️ Caution - the appliance is very heavy. Use caution when unpacking and opening the door, danger of tipping.

- To protect the base from damage during installation, attach a hard board, linoleum, etc., to the floor in front of the intended installation location.
- Remove any cable clips from the back of the appliance.
- Take the supplied accessories out of the protective packaging.
Do not remove the installation supports from the appliance door. They will be used later in the installation niche.

There are transportation safety devices inside the appliance to protect the shelves and storage compartments until installation is complete. Do not remove them, or parts may be damaged.

Check the appliance for damage in transit.

Do not install the appliance if it is visibly damaged. If in doubt, contact your dealer.

Loosen the bracket that holds the appliance to the pallet.

Caution! The appliance is no longer secured and may be unstable.

From the rear of the appliance carefully lift it from the pallet. Once the appliance is on the ground it can be wheeled around.

RemoteVision module installation
(optional accessory)

Always disconnect the appliance from the power supply when performing installation, maintenance or service work. Install the RemoteVision module before placing the appliance in its installation niche. Once connected the RemoteVision module will increase the energy consumption of the appliance.

The slot for the RemoteVision module is located in the lower area of the back of your appliance.
Installing the appliance

1. Unscrew the screws 1 on the cover 2 and pull off the sticker 3.
2. Remove the cover 2.
3. Push the module into the slot until it locks into place.
4. Connect the appliance to the power supply and turn it on. After several seconds the indicator light 5 will come on.

The indicator light will display different colors one after the other; any control light at the end indicates that the module was correctly installed.

If the indicator light does not come on, installation of the module was unsuccessful. In that case, repeat the process. If that does not correct the problem, contact Miele.

- Pull the antenna 4 straight out.
- Guide the cover 2 over the antenna 4 and screw on the cover.
- Angle the antenna 4 so that it faces to the right or left.
- If necessary, disconnect the power supply and continue installing the appliance.

Preparing the installation niche

Keep the appliance door closed until it is securely fastened in the niche. Tipping hazard.

Because of the size and weight of the appliance, it is essential to ensure that the appliance cannot tip over once it has been mounted in the niche.
Mounting Accessories

The mounting accessories needed for installing the appliance into the niche are included in the packaging. Several plastic bags are included which are numbered alphabetically.

The bag needed for each step will be marked with its respective letter.

Anti-tip brackets

The anti-tip brackets keep the appliance safely secured in the installation niche and prevent it from tipping.

Two anti-tip brackets are recommended for each appliance. For side-by-side installations 4 brackets are recommended.

- Position the anti-tip brackets on the left and right in the installation niche so that there is no more than 3/8" (10 mm) of space between the brackets and the side walls.
- Mark the drill holes in the anti-tip brackets on the back wall and on the ceiling of the installation niche.
- Set the brackets aside - they will be needed again later.

Screws are supplied with the appliance for various applications/materials.

If the anti-tip brackets cannot be attached securely with the screws supplied, an alternative anti-tip device can be used.

Assure that there are no electrical wires in the area which the screws could penetrate - risk of injury and damage.
Now attach the installation niche to the wall.

The built-in cabinet must be secured to the wall behind it with several screws.

In a cabinet with a back wall

- screw the back wall of the cabinet in several places directly to the wall behind it.
  For this, use suitable plugs/screws depending on the type of wall.

In a cabinet without a back wall

- screw the cabinet to the wall behind it in several places using suitable mounting brackets.
  For this, use suitable plugs/screws depending on the type of wall.
Securing an alternative anti-tip device

If the anti-tip brackets cannot be attached securely, an alternative anti-tip device can be used. Ensure that there is no "give" between the appliance and the anti-tip device.

If possible, always screw the wooden beam to existing studs.

- Cut a wooden beam (cross section min. 3" x 4" [75 mm x 100 mm] to the required length).
- The length is equal to the width of the installation niche.
- If the installation niche is deeper than the appliance, select a beam with a larger cross section, or attach two beams.
- The beam must cover the appliance by at least 2" (50.8 mm).
- Mark the installation height (lower edge of the beam) on the rear wall of the niche.
- Select screws according to the thickness of the wooden beam. Example: 3 ½" (89 mm) screw for 2x4 beam.
- Determine the number of screws based on the cavity width, to ensure that the beam will be attached securely.
- Locate wall studs near the rear wall of the cavity and mark drill holes in the beam.
- Pre-drill the wooden beam.
- Attach the wooden beam to the rear wall of the niche.
Installing the appliance

Sliding the appliance into the installation space

- If a side-by-side installation is desired, connect the two appliances together. See the Installation Manual included with the "Merging Kit".

- Un螺丝 the plinth.

- To protect the corners of the installation space, attach edge protectors where needed (not included).

- Plug the appliance into the power outlet ①.

The plug of the appliance should be easily accessible after installation. If the plug is not accessible after the appliance has been installed, disconnection from the power supply should be completed via the circuit breaker.

In the case of side-by-side installations, a separate outlet must be used for each appliance.

- To prevent the power cord from becoming caught: Tie a piece of string to the middle of the power cord and feed it forward under the appliance. When sliding the appliance in, pull the cable forward ②.

- Carefully slide the appliance into the space.

If resistance is felt when attempting to slide the appliance into the installation niche - for example, because the floor is uneven,

- Turn the rear adjustable wheels slightly outward (see "Aligning the appliance"), then push the appliance in.

Be careful not to damage the power cord attached to the floor.

- Remove the edge protectors.
Aligning the appliance

- Align the appliance with the custom front.

The installation aids 3 on the appliance door have been designed for custom door thicknesses of 3/4" (19 mm) and 1 1/2" (38 mm).

The height-adjustable feet at the front and rear can all be adjusted from the front:
- Front feet:
  Adjust with a ratchet 5/16" (8 mm) 4
- Rear feet:
  Adjust with a (cordless) screwdriver and/or a ratchet 5/16" (8 mm) for fine adjustment 5

- Use a level to align the installation aids 3 on the door.

Important!
When unscrewing the height-adjustable feet, proceed gradually, alternating between left and right.

- Unscrew the height-adjustable feet until the mark on the base has reached the indicated guide dimension 1 1/4" (32 mm). The guide dimension of 1 1/4" (32 mm) is related to a niche height of 84" (2134 mm).

- Align the custom door with a level.

Note:
- When unscrewing the height-adjustable feet, proceed gradually, alternating between left and right.
- If using a wooden beam as an alternative anti-tip device, rotate the appliance all the way toward the wooden beam.
Installing the appliance

Attaching the appliance to the installation niche

1. Screw the attachment plate lugs to the overhead furniture/fixtures.
2. If there is no way to attach the top of the appliance, it can be attached to the sides of the installation niche.
3. Pull out the plate side lugs.
4. Secure the attachment plate side lugs.
5. If there is a fairly large gap above the appliance, cut a wooden beam to fit exactly and place it in the gap.
6. If necessary, shorten the filler strip to the required height.
7. Place the 2 strips on top of each other.
8. Insert the filler strip until you hear it click into place.

Inserting the appliance
For a side-by-side combination the filler strips from both appliances are put together to form one long filler strip:

- Take the peg from the "side-by-side merging kit" and insert it halfway into the filler strip rail on the left-side appliance.
- Place the second filler strip on the peg and press both filler strips together.
- Insert both filler strips into the installation space above the appliance, until they click into place.

■ Open the appliance door.

■ Screw the attachment plate lugs to the adjacent furniture/fixtures.

With side-by-side combinations, only the external side of the appliances can be secured to the niche.
Preparing the custom door

- Open the appliance door.
- Unscrew the installation supports 12 from the appliance door.
- Loosen the remaining screws from the strips 13 on each side of the door, then remove.
- Set aside the screws and side strips 13 - you will need them again later.
- Remove the light switch cover (see arrow).
- Close the appliance door.

- Measure the distance X between the bracket from the door and the overhead furniture/fixtures.
- Loosen the two nuts. Set aside the nuts - you will need them again later.
- With the inside facing up, lay the custom door on a stable surface (to avoid scratch marks, place some plastic or a cloth on the surface).
Mark the distance X on the back-side of the custom door.

Also calculate and mark the center of the custom door Y.

Remove the mounting frame from the appliance door and position it according to the markings on the custom door.

Pre-drill the holes.

Tightly screw on the bracket using the pre-drilled holes: Attach the bracket to each attachment point with at least one screw.

Attach the bracket at the top with at least 10 screws.

Please note: When attaching the mounting frame onto two adjacent doors (see "Front panel gap kit") screw into the thicker outer frames of the doors only.

The bracket includes a variety of holes for the various design options of custom doors.

When performing work on the custom door, always observe the following:

- Always select the best load-bearing surface of the custom door as the location for screws.
- Always select a screw length that is shorter than the thickness of the door front.

Secure the door handle to the front of the appliance from the inside.
Installing the appliance

Attaching and aligning the custom door front

- Open the door and hang the custom door with the mounting frame over the threaded bolts 14.

![Diagram]

- Put the side strips 13 back into place and screw them completely down on both sides of the appliance door. Bag E contains spare screws for this purpose.

- Screw the nuts 15 a few turns onto the threaded bolts 14. Do not tighten the nuts completely.

- Close the appliance door and check the distance to doors of adjacent furniture/fixtures.

- Align the custom door height with the threaded bolts 14.

- Now tighten the nuts 15 on top. This secures the appliance door.
Attaching the fixing brackets

(Only for appliances using the "Front panel gap kit".)

The fixing brackets are used to secure the custom door front to the bottom of the appliance door.

- Open the appliance door all the way.
- Slightly loosen the screw (1.).

Position the fixing bracket on the appliance door (2.) and pre-drill a hole in the custom door front.

Screw the fixing bracket securely to the custom door front (3.).

Tighten the screw (4.).

Put the cover on the bracket (5.).

The number of lower brackets will depend on the width and the design of the custom door.

Attaching the covers

To mount the cover strips on both sides of the door, click them into place from bottom to top, into the gap between the appliance door and the custom door.

Screw the brackets onto both sides of the appliance, to hold the cover strip.
Installing the appliance

**Attaching the toe-kick cover**

The maximum height of the toe-kick cover is 4" (101 mm) from the top of the floor. Do not cover the ventilation slits in the plinth. Risk of damage to the appliance.

- If required, cut the toe-kick cover to the required length and height.

- Attach the plinth to the appliance, and put the included cover plates in place.

**Insert the cover strip into the space between the appliance and the wooden panel.**

For side-by-side combinations, the cover strips (on both sides of the appliance) are applied to the outermost spaces only.

- Attach the light switch cover.

- Attach the plinth to the appliance, and put the included cover plates in place.
Remove the foil from the adhesive strips.

Attach the toe-kick cover to the plinth.

**Mounting the air separator**

The air separator keeps the supply and exhaust air separate. This prevents warm exhaust air from flowing into the machine, optimizing the energy performance of the unit.

- Position the air separator in the center of the appliance door.
- From below, screw the air separator firmly onto the door with the 2 screws.

If necessary, shorten the three parts of the air separator.

Insert the foam pieces back into the sides.
Avoid the risk of electrical shock
- Plug into a grounded 3-prong outlet.
- Do not move the ground plug.
- Do not use an adapter.
- Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

Improper connection of the equipment grounding conductor may result in electric shock. If you are in any doubt as to whether the appliance has been properly grounded, have the appliance checked by a qualified electrician or service technician.

Installation, repairs and other work by unqualified persons could be dangerous.

Before installing the appliance, verify that the voltage, load and circuit rating information found on the data plate match the household electrical supply.

If there are any questions regarding the electrical connection of this appliance to the power supply, please consult a licensed electrician or call the Miele Technical Service.

USA 1-800-999-1360
CDN 1-800-565-6435

The appliance is supplied with a UL-listed, 3-wire power cord and NEMA 5-15 P plug ready for connection to a 120 V, 60 Hz supply. The fuse rating is 15 amps.

The appliance requires a 3-wire receptacle. The receptacle must be installed by a licensed electrician only.

In the case of side-by-side installations, a separate outlet must be used for each appliance. Ideally, the power outlet should be next to the appliance and easily accessible. Do not connect the appliance to the power supply by an extension cord. Extension cords do not guarantee the required safety of the appliance (danger of overheating).

If any changes are needed to the household wiring or power supply, this work must be performed by a qualified electrician.
Miele's RemoteVision Wi-Fi technology creates a 'virtual link' between your appliance and our monitoring center. If a fault occurs, Miele's client service center will be notified and contact you, or another trusted individual identified on your call roster, in order to gain access to your appliance to fix the problem.

For information on set-up and installation of the RemoteVision module see the "Installation" section of this manual.

Be sure your wireless system meets the following requirements

– A wireless router that supports an IEEE 802.11b/g protocol
– Windows XP® or newer operating system, Mac® OS X 10.3 or higher
– Cable or DSL modem
– Microsoft® Internet Explorer 6 or higher, Safari 2.0 or higher, Firefox 1.5 or higher

* Please note that each wireless router manufacturer supplies their own device drivers and setup programs. Due to the differences in manufacturers, exact router setup instructions are not included in this manual. Wording and instructions may vary.
RemoteVision (optional accessory)

Accessing the RemoteVision control panel

- Touch the access button "♀" so it turns yellow.
- Note the position of the ∨ button, but do not touch.
- Touch the access button "♀" again so it turns white.

Only the access button "♀" is visible.

- Place one finger on the position of the ∨ button and hold (the ∨ button will not be visible).
- While holding down the ∨ button, press the access button "♀" once. Keep holding the ∨ button down until the following appears in the display (approx. 5 seconds).

Access to the Custom settings mode is now active for approximately 10 seconds.

- Tap the ∨ button until ♦ appears in the display.
- Touch the access button "♀" to confirm.

See the table on the following page for a description of each setting in the display.

- Use the ∧ or ∨ buttons to select the RemoteVision options.

The module has been connected to the network when ♦ appears in the display. If ♦ does not appear, refer to the "Network options" section of the XKM 2000 Installation Instruction manual.

- Press and hold the access button "♀" for 2 seconds to confirm the change.

To return to the main menu, tap the ∨ button until a solid ♦ - appears in the display.

- Press the access button "♀" to confirm.

- Tap the ∨ button until a ♦ appears in the display.

- Touch the access button "♀".

You have left the Custom settings mode.

When you are in the Custom settings mode the door alarm is turned off automatically. Once the door is closed it is reactivated.
