# INSTALLATION SPECIFICATIONS

**Product Details** 

### Niche/Cutout Details

- 1) The ducting can also be connected at the back.
- (2) The ventilation hood is secured in the cut-out by clamps. This requires that the installation surface is made of a solid material, such as wood. Make sure that the material is strong enough to bear the weight of the ventilation hood and the edge extraction panel. There must be a minimum distance of 1" (25 mm) between the areas around the clamps and any structures or components, such as struts or cables.
- ③ Alternatively, the ventilation hood can be secured to four fixing points on an interim shelf.

## R2000

(optional accessory)

If you would like to reduce the environmental impact of your ventilation system by limiting the CFM output the Reducing Collar can be installed. It reduces the air flow to less than 400 CFM. Check local building codes for maximum CFM requirements.
