PG80 SERIES — 8056 DISHWASHER

Miele's freshwater dishwashers, featuring high throughput and short cycle times, meet the highest demands for cleaning quality and hygiene requirements. Whether you need glassware specific wash programs, the ability to wash up to 380 plates per hour, require final rinse temperatures of 158°F for maximum hygiene, our freshwater dishwasher PG 8056 is ideal. With 6-minute wash cycles, 13 programs, simple to use controls and a range of configurable baskets, including the option to accommodate 19 ¾" x 19 ¾" plastic racks on 2 levels, this dishwasher can handle the unique demands of any tap room!

Fresh water system

Miele Professional freshwater circulation dishwashers ensure consistently high levels of cleaning performance by taking in fresh water between individual phases of a program cycle. A thorough final rinse is carried out at a temperature adjusted to the washed items, significantly exceeding commercial dishwasher hygiene requirements.

Special beer glasses program

Cold rinsing for glassware using the Beer Glasses program, which enhances beer froth and promotes colder serving temperatures.

Short cycles

Connections for hot water, intelligent dishwashing technology and a powerful heater pump ensure optimum program durations and cleaning results.

Perfect GlassCare

Soft water helps ensure thorough cleaning, but it is aggressive towards glass. That is why Miele Professional dishwashers use Perfect GlassCare in the glasses program. This technology adjusts the water hardness precisely so that all the glasses are thoroughly but gently cleaned.

Low consumption values

Miele Professional dishwashers are acclaimed for consumption efficiency. From the product design stage, they are engineered to achieve perfect dishwashing results by using no more water, energy and detergent than necessary.

User convenience

The 3-line display control panel provides information on the selected program and the current program status. Important program parameters can be conveniently changed using the intuitive touch controls.

Integrated filter system

Miele Professional dishwashers feature permanent filtering of the wash water, to help protect the machine from damage and provide optimum cleaning results.

Plastic baskets on two levels

19 3/4 x 19 3/4" plastic baskets can be used on 2 levels, offering maximum flexibility to clean more dishes, faster. Three spray arms allow perfect cleaning results to be achieved on both washing levels.

Connection for dispenser module

To simplify the use of liquid detergents and rinse aid, up to 2 liquid dispensing modules can be optionally connected, depending on the model. Precise and automatic dispensing ensures perfect cleaning results and easier handling.

FEATURE HIGHLIGHTS

- 6 minute wash cycles
- 13 programs
- Powerful cleaning for taproom demands
- Simple to use controls
- Highly configurable basket placement
